

3.3 Dispersionsrelationen

ω - Ebene

$$\omega = \pm \omega_j \sqrt{1 - \left(\frac{\omega_j}{2\omega_j}\right)^2} + i \frac{1}{2} \delta_j$$

es gilt

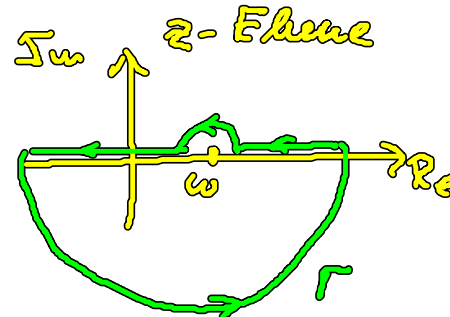

$$|\omega f(\omega)| \xrightarrow{\omega \rightarrow \infty} 0$$

$$f(\omega) = \frac{1}{2\pi i} \int \frac{dz f(z)}{z - \omega}$$

$$f(\omega) = \int_{\text{Re}} \dots = \int_{\text{Re}} \dots + \frac{1}{2} \int_{\text{Im}} \dots$$

$$\Rightarrow f(\omega) = -2\pi \int_{-\infty}^{+\infty} \dots$$

$$P \int_0^{\infty} f(x) dx = \lim_{\epsilon \rightarrow 0} \left[\int_0^{x_0 - \epsilon} f(x) dx + \int_{x_0 + \epsilon}^{\infty} f(x) dx \right]$$

x_0 Polstelle

$$O = a_1 \exp\{i\omega_1 t\} + a_2 \exp\{i\omega_2 t\}$$

$$\Rightarrow a_1 = 0 \wedge a_2 = 0$$
